CUSTOM COMMERCIAL DESIGN OPTIONS

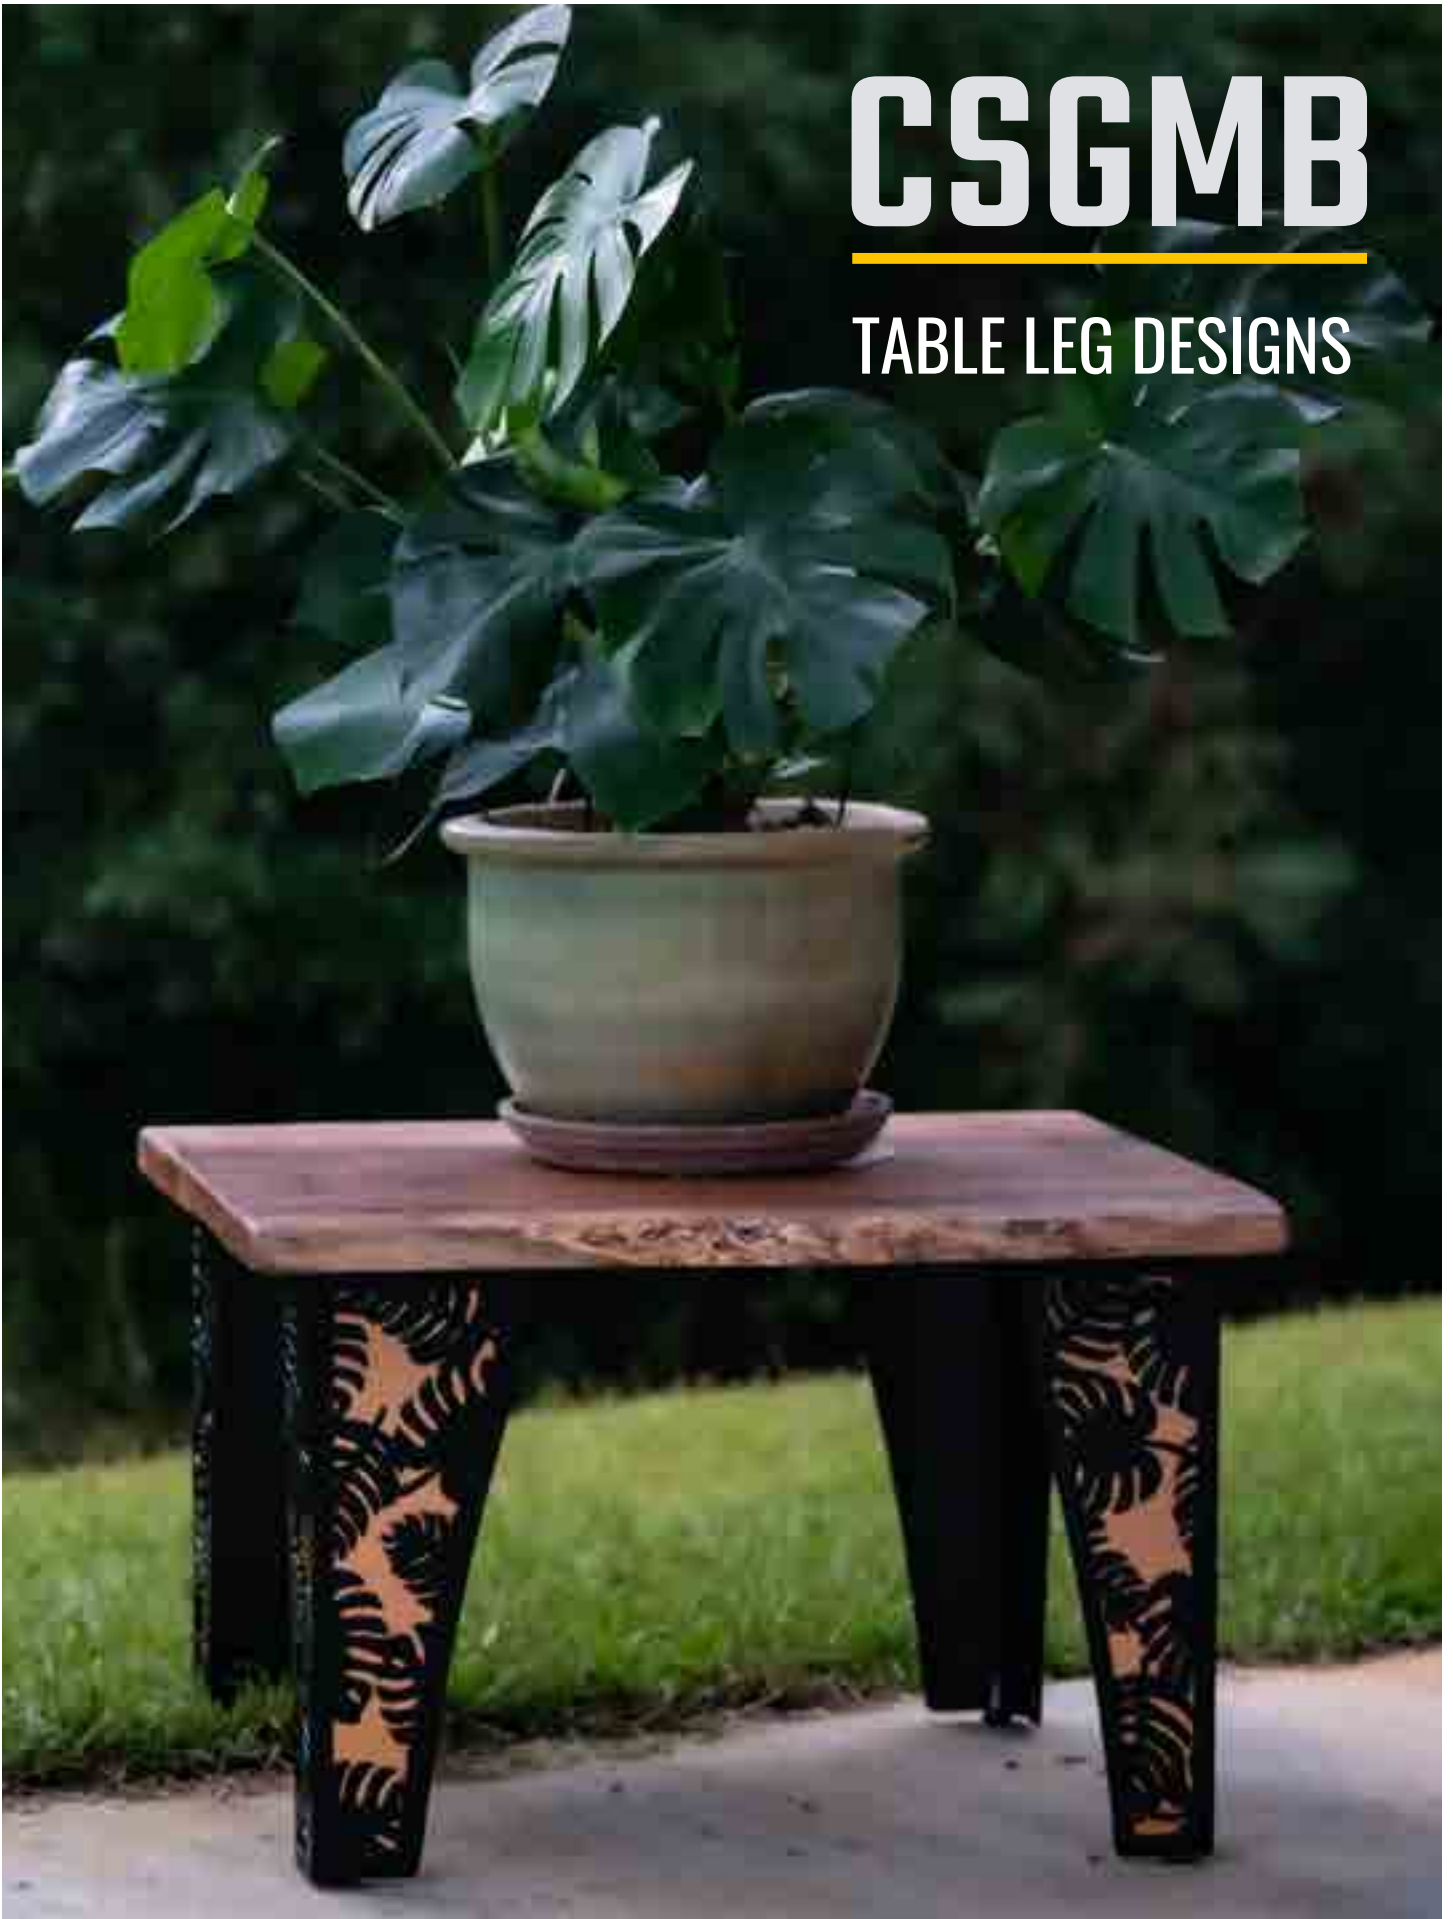

We started out our business as exclusively custom. The entire process allows us to work one on one with our clients. It begins with acquiring unique pieces of wood, to drawing up designs, and ending with a truly one of a kind piece. We encourage the client to be involved in every decision made and even given the option to utilize personal items for encasement projects. Our shop is equipped with a Laser and CNC machine for even more specialized projects.

Please visit our website to inquire about a custom piece or commercial project you may have!

ABOUT TWO BROTHERS

Family has always been the most important thing to us. Both of us are lucky enough to be able to call our job fun while creating beautiful furniture home accents together. Like most brothers, we are quite opposite which makes for an interesting day in the work shop. But at the end of the day, what comes out of the shop is a one of a kind, long lasting, work of art.

It is a true pleasure to be a part of the entire process and continued life of the tree. The job of showcasing the beauty of nature on is not one we take lightly. From the grain to the live edge, displaying the natural form is our main goal.

The process that begins from whole logs and ends as finished pieces for a home is our greatest enjoyment. We have the awesome privilege to see the wood from the source and be a part of the entire process. The dirty, hard work demanded from a lumber business, straight into the creative atmosphere of producing one of a kind pieces in wood working. Each piece is individual just as every tree is unique. Each piece is created through dedication and a love for the craft. Each piece and particular cut guides us through to the end result of a truly custom product. All wood is sustainably sourced from our own mill in the Smoky Mountains of Tennessee and our Two Brothers Wood Works shop is located in the Murrells Inlet, South Carolina. Our wood is strictly only sourced from trees that were removed for safety reasons or already down due to weather, natural disaster, etc. Through owning our own mill, we are able to utilize trees that normally would have been burned or used for firewood.

Patience, hard work, and a love for creating. We strive to bring a timeless craftsmanship into a modern world. Our philosophy surrounds the method of using what is God given to us in a resourceful manner. The joy of using parts of a tree that may not be used otherwise gives us immense pleasure to transform it into art pieces for others to enjoy. We are environmentally friendly and always choose American made/sourced materials.

ABOUT CONTROL SOLUTIONS GROUP

A local metal manufacturer serving the Grand Strand of South Carolina. We are a team of designers, craftsmen and dedicated problem-solvers. Offering sheet metal cutting, specialty fabrication, product design and welding. We take great pride in offering American made, hand-crafted products to our clients on a local, and national level.

It is our desire at CSG to produce incredible results while building strong relationships with our clients. From the design and manufacture of your products, quality-assurance inspection, and delivery, we look forward to assisting you with your manufacturing needs.
